

Allion Smart Memory Card and USB Switch

Allion Smart Memory Card and USB Switch is the best solution for the R&D, DVT, QA testing of the USB and SD/MMC/MS related products. It can help you to expedite the testing time and reduce the unnecessary operation error with the software controlled switch.

Moreover, the Smart Switch can be integrated with other automation testing tools (TestQuest Pro) to perform the time wasted, non-technical, over days stress testing items, or additional integration testing items with other systems/devices.

Applications:

Memory Card Switch: It provides one Host to four Slave SD/SDHC/MMC/MS memory card slots and enable the host simulate the hot-plug and connect to four different brand/size memory cards by the software control.

USB Switch: It provides bi-directional, one Master USB to four Slave USB switches function and enables to simulate the USB hot-plug between 1 host to 4 devices or 4 hosts to 1 device, and simulate the USB Charge/Discharge for mobile devices by software control.
